

## Product Overview

### Preempt Business Risk with Predictive Security Intelligence

CORE Insight™ Enterprise is the first security intelligence solution that enables you to continuously predict IT security threats and preempt business risk. By combining advanced threat simulation with real-world threat replication, Insight allows you to:

- Improve security, optimize budgets and increase efficiency
- Predict threats without disrupting operations
- Reveal the business implications of security exposures
- Eliminate data overload and gain actionable information
- Connect real risks to specific operational and business goals
- Make the right decisions to ensure business continuity

Insight complements and interacts with your most critical security solutions.

### Proactively assess your security with real-world offense

Insight simulates potential attack paths and safely replicates actual attacks, revealing exposures across multiple threat surfaces.

**Threat Planning and Simulation:** Model network attacks to identify where exploit-based testing might be necessary.

- **Discover** and profile network assets
- **Reveal** attack paths that expose business assets
- **Identify** exploits that could be used by attackers

**Threat Replication:** Validate if critical assets could be breached and understand the risk to your business.

- **Network:** Exploit vulnerabilities and weak passwords
- **Endpoint:** Evaluate phishing awareness and defenses
- **Web:** Verify SQL injection and cross-site scripting exposures

### Add unmatched intelligence to your IT security ecosystem

A real-time intelligence platform, Insight provides unified threat validation and prioritization while feeding key analytics to your security ecosystem.

- **Vulnerability Mgt:** Pinpoint the most critical exposures amidst scan data
- **GRC:** Verify compliance and reveal the risks of non-compliance
- **End-User / Endpoint Controls:** Evaluate awareness and defenses
- **Security Controls:** Ensure the efficacy of firewalls and other defenses
- **Detective / Forensic Controls:** Trace paths from initial breach points; find subsequent business risks
- **SIEM:** Understand alert severity in the context of your business

CORE Insight follows a seven-step process to preempt risk across your organization.

## Realize the benefits of predictive security intelligence throughout your organization

CORE Insight enables you to take a proactive, head-on approach to eliminating business risk.

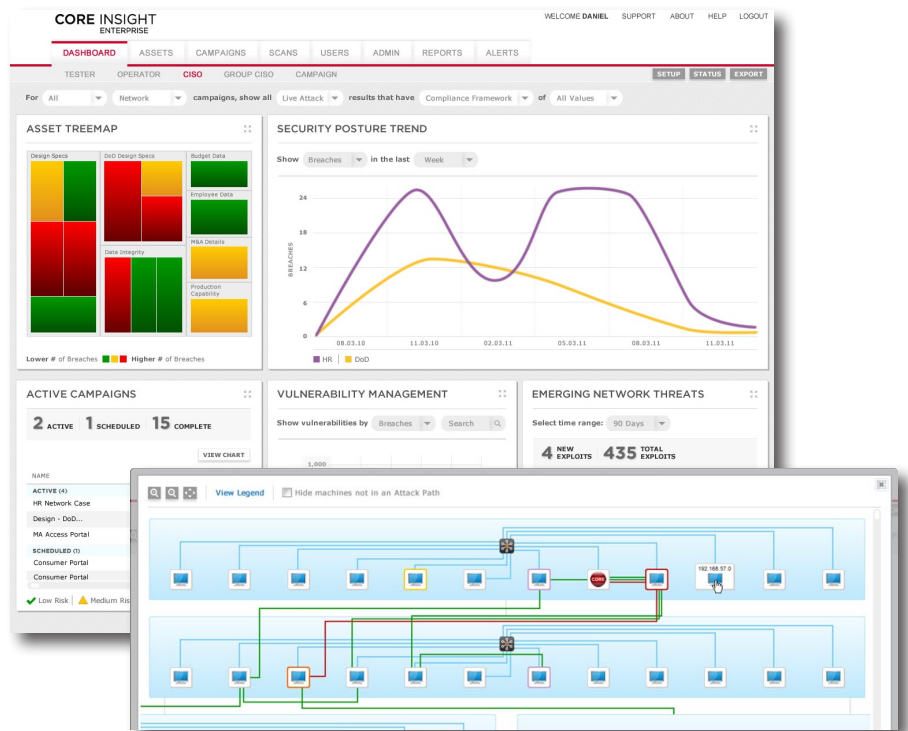

- Predict security threats**  
 Proactively identify exposures throughout your environment and understand how they impact your business
- Validate critical vulnerabilities**  
 Increase efficiency, pinpointing critical threats previously lost in disparate data feeds
- Communicate risk clearly and effectively**  
 Present risk analytics in the context of key assets, operational areas, compliance mandates, and business objectives
- Assess security controls**  
 Test defense efficacy and make informed spending decisions
- Scale security assessments**  
 Expand scope, reach and frequency without adding headcount
- Assess and analyze web application vulnerabilities**  
 Reduce risk and minimize development spending by identifying exposures before go-live
- Test end users and endpoints**  
 Address lapses in awareness and minimize threat surfaces
- Achieve comprehensive asset visibility**  
 Reveal and track previously unknown systems and attack targets
- Stay ahead of emerging threats**  
 Receive several updates each month containing new and enhanced testing capabilities

## Gain centralized visibility into your enterprise security posture

Insight delivers intelligence targeted to different audiences and objectives. For example, the Executive Dashboard provides:

- Heat maps:** Compare threat levels across business units, locations and more
- Security posture trends:** Get metrics for resource allocation and business justifications
- Active campaigns:** Monitor the progress of current security tests
- Vulnerability management charts:** Track vulnerability management efficiency
- Emerging threats:** See how Insight testing capabilities match to your environment
- Drill-down capabilities:** Click-through to actionable information for addressing threats

Insight also offers Tester and Campaign Manager dashboards, as well as Executive, Campaign, Trend and Vulnerability Validation reports.

The CORE Insight Executive Dashboard provides key metrics about your real-world security posture. Drill-down capabilities include visualizations of how attacks could leverage multiple vulnerabilities to reach critical assets in your environment.
